

Anti Perspiration Pad Designed for Adjustable beds and Waterbeds

Reduces sweating - From £80

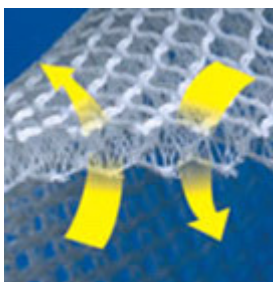

This new hi-tech material has been developed to solve the problem of sweating on all types of mattresses by simply creating an air gap between you and the mattress surface. Made up into a mattress pad by High & Dry Manufacturing Ltd and placed between the zip off washable cover and the foam or water mattress.

The latest technology allows 3mesh to vary the construction of the two outer layers and the pile yarn independently. Therefore it is possible to adjust the hardness and the spring characteristics. In this way Müller Textil have developed a 3mesh spacer fabric to suit the mattress application perfectly.

Cushioning 3mesh - Perfect cushioning from hi-tech textiles:

In the case of ductile cushions security and reliance play crucial roles. Only if the material adapts to the body perfectly, humans feel wholly comfortable. Two things are therefore especially important for 3mesh spacer fabric. The soft cushioning and high shock absorption, with 3mesh both are perfect!

Ventilation:

Owing to its characteristics and the simple processing 3mesh spacer fabric is perfectly suited for the use in mattresses.

3mesh is also used in many medical product areas.

Passive ventilation is guaranteed by constant air exchange and circulation through 3mesh climate layer and 3mesh climate cover.

Extremely high air distribution in all directions – even under pressure

Prices

	Single	Double	King	Super King
Widths	2'3" - 3'3"	3'6" - 4'6"	5' - 5'6"	6'
Prices Include VAT	£80	£100	£120	£130
