

Vario-Tec from Westmont Design Germany

We are distributors for Westmont design Germany. Manufacturers of ultra flat drive technology, an alternative to the 'Serena' mechanism.

As a result of unfavourable exchange rates and import costs, add **£100** to the price of the Serena Adjustable bed mechanism.

The Vario-Tec German design

The Vario-Tec is an alternative mechanism to the Serena, allowing drawers to be positioned in the sides of the bed base as opposed to being in the foot end.

The powerful and ultra quiet drive technology, consisting of two maintenance-free low voltage motors, is integrated invisibly into the drive lines. These lines have fully encapsulated metal fittings – the total height measures only 87.5 mm.

This structure holds the spring slats and replaces the usually necessary inner frame

Drawers are now available in the side of the bed base because the motors are in-line rather than below.

All lifting mechanics are integrated into the side drive lines.

4 joints enable the control of 5 zones. Neck and back zone are moved synchronously (synchro-drive). The drive technology is equipped with steel drive bars. The electronics are integrated into a separate box, which is docked to one side of a line in the sitting area. Both motors are also positioned at the sitting part.

The product can be cut off from the mains and lowered mechanically in case of an emergency.
